

The Indian Medicinal Plants Database has been developed by the Foundation for Revitalisation of Local Health Traditions (FRLHT). This database incorporates **7263 botanical names**, more than **1,50,000 vernacular names** in ten different Indian languages & more than **5000 authentic images** of Indian medicinal plants duly linked to the specific botanical entities.

The medicinal plant species included in the database have been compiled and arranged under the six Indian Systems of Medicine namely

- **Ayurveda** (2559 botanical names/ 1540 species)
- **Siddha** (2267 botanical names / 1149 species)
- **Unani** (1049 botanical names / 493 species)
- **Homeopathy** (460 botanical names / 372 species)
- **Sowa-Rigpa** (671 botanical names / 250 species)
- **Folk** (6403 botanical names / 5376 species)

Within each system of medicine one can browse the data for a specific botanical name or vernacular name. Each of the botanical names has proper author citation and linkage with botanical synonyms where ever applicable. Validation of specific botanical names has also been incorporated to establish the proper identify of the plant entity. In respect of each botanical entity enlisted under any of the codified systems of Indian medicine, the relevant Bibliography, establishing its inclusion under that system, has also been incorporated.

Similarly the bibliography relating to the geographical distribution of specific plant species as compiled from the published literature, has also been included along with the facility to view the summarized comments relating to distribution.
